- ▮ An investment that will yield major returns in terms of visibility

Architectural Signage

Is a bespoke signage solution, through which brands are strengthened. Companies using this visual source of promotion are able to elevate their brand image, highlight corporate messaging and raise awareness around the products and services offered.

3 Advantages of Using Architectural Signage for Business Purposes
Visual Stimulation and Branding

Pylon Signage

Because of its sheer height, pylon signs can be seen from a great distance, making them a wonderful advertisement for your business and a great tool for grabbing peoples' attention.

The large size of a pylon sign makes it a great canvas for beautifully portraying your company's message. Because they tend to be larger, you could find that you may have extra space to showcase images, logos and text without having to cram your design together.

Acrylic ACP LED Glow Sign Boards

In the consumer and retail store business, many customers make purchase decisions and judgements based on first impressions. That's exactly why shopping malls are typically so glitzy and alluring. Shop fronts, building facades and store entrances are all designed to entice prospective clients to walk in. And the primary component of your storefront is the shop's sign board. In addition to showcasing your company's name and brand, this sign board has to be so attractive, that it should literally stop people in their tracks.

*5 Types of
Acrylic ACP LED Glow Sign Boards
detailed description...*

1. 3D ACRYLIC LETTERS MOUNTED ON AN ACP BASE FRAME

The letters on this board are made from laser cut acrylic. They are mounted on an ACP frame and jut out approximately 3 inches from the base. LEDs are embedded within the letters to give them a beautiful glow. Acrylic box letter boards are ideal for corporate offices and retail stores.

2. 3D ACRYLIC & ALUMINIUM CHANNEL LETTERS

This board has a similar form factor like that of the 3D letter board, except for the fact the letters have a metal channel / profile on the side. The light glow comes only from the front surface. Channel letter sign boards are ideal for corporate offices and retail stores.

3. ACP ROUTER CUT SIGN WITH REVERSE ACRYLIC AND LED

This type of board is used where the letters are very small or the content on the sign board is very intricate. The acrylic letters are not 3D but flush with the base board. As the name suggests, the letters are hollowed out from the base ACP frame similar to how a stencil is cut from paper.

4. LED ACRYLIC BOARDS WITH STAND ALONE 3D LETTERS MOUNTED DIRECTLY ON THE WALLS OR A METAL FRAME

This sign is made of stand alone letters only. The acrylic letters in this case are not mounted on any kind of base board. Further LED modules are embedded within the letters to make them glow. These letters can then be fixed directly on the wall.

5. METALLIC LETTERS WITH SIDE LED GLOW

*M*etallic letters always have a charm of its own! The solid-cut letters hook attention like no other and have the thickness and depth that imparts a stunning finish to the design.

Metallic letters by using a wide variety of materials. Primarily, we use materials like brass, stainless steel, titanium, aluminium and korean top material
